Success because Splash

Tax? Community decides!

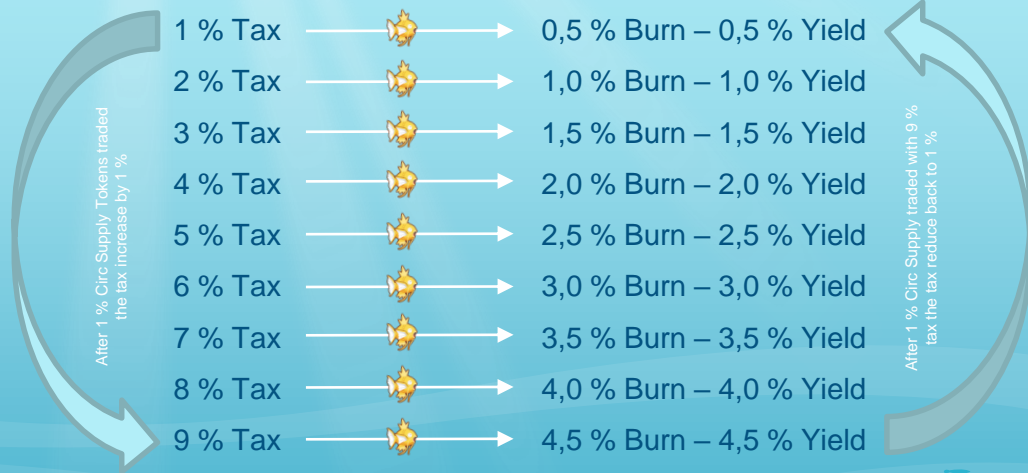

Magikarp is the only Token where the distribution tax and burnrate is decided by the community.

The community can decide on the total taxrate, the burnrate, and the distribution rate during frequent voting events. The total taxrate is comprised of the burnrate and the distribution rate.

Storm Mode

Storm Mode works by cycling through fees based on trading volume. After every 1% of current supply traded, the fee increases by one increment. This happens until it resets after reaching the highest increment and 1% of current supply has been traded in that increment.
